I wanted you to see the comments I placed on the online regulations.gov site.  
I will also put up a personal comment supporting the listing of the site and encourage other YCAG members to add their personal comments.  
Have a good day!  
Peggy

The Yerington Community Action Group (YCAG) supports the Anaconda Copper Mine being placed on the National Priority List.

We have requested this important step, over the past twelve years, five times. We believe listing the site is the only solution available to access the needed funding to move forward with cleaning up the hazardous waste on the site that is a risk to human health, wildlife, our soil, groundwater and air.

This is vitally important to the human and environmental health of our community. The addition of the Anaconda Copper Mine to the NPL will allow the EPA to address potential adverse human health impacts. Without the funding available through the Superfund, there is no money to address the dangers posed by the fluid capacity issues on the OU8 portion of the site.

We thank you for taking this step and fully support the listing.

Respectfully submitted,

Yerington Community Action Group  
Peggy Pauly (Point of Contact)
